

COSMETIC ROLL-CIT™

Collagen channeling for natural Collagen Induction Therapy

The **ENVIRON® COSMETIC ROLL-CIT™** is the latest revolutionary design from Environ® in skin care treatments. It is a world first and will dramatically increase the effectiveness of skin care products, allowing improved penetration of vitamins into the active layers of the skin.

Research has shown that micro-needles that puncture the horny layer of the epidermis increase the amount of large molecules that can penetrate through the skin by 10,000 fold. Therefore, what was required was a system that permitted micro-needling of the horny layer of the skin without damaging the lower levels of the skin. Because there are no nerves in the upper part of the epidermis, this layer can be punctured without pain.

After extensive research, Dr Fernandes designed an instrument that could be used by anyone, anywhere, and would safely puncture the horny layer of the skin only.

A BEAUTIFUL SKIN FOR A LIFETIME
